McEnery Jr. and his development team to release the source code and mining software on January 7, a few days ahead of schedule. Early press materials promised a proper and fair release, with no pre-allocation of coins. However, later statements from the developers confirmed that approximately 0.37% of the maximum money supply of Coinye had been reserved for the creators of the coin before launch. The developers claimed that this was to cover unexpected legal and development costs."

Texas incentives aim to cut methane emissions from flared gas using bitcoin mining. In January 2024, the US Energy Information Administration launched a mandatory survey of cryptocurrency miner energy use but suspended it one month later after it was successfully challenged by miners before the United States District Court for the Western District of Texas. In Canada, due to high demand from the industry and concerned that their renewable electricity could be better used, the provinces Manitoba and British Columbia paused new connections of bitcoin mining facilities to the hydroelectric grid in late 2022 for 18 months while Hydro-Québec increased prices and capped usage for bitcoin miners."
